

## PROJECT DEVELOPMENT

# European Creators' Lab

**Immersive technologies are still evolving and changing in a breath-taking tempo, but the real challenge for creators is to understand the new grammar of spatial and sensorial narratives. This is an exclusive development lab for VR, AR and 360° film.**

**Date: 27-31 May 2019, Munich**

The lab hosts some 50 participants, partners and mentors where creatives exchange their knowledge and develop ideas up to the first prototype together in teams, mentored by international experts. The Lab focuses on storytelling, content development and the creative challenges of immersive worlds.

The 5-day training course includes intensive expert sessions, keynotes and hands-on workshops. It is a place to learn, explore, experiment and collaborate - in a totally competitive-free, multidisciplinary and creative environment.

## TARGET GROUP

**authors, directors, VR/AR developers, game designers, programmers, 360° filmmakers, technicians, creative producers, journalists, media enthusiasts, artists**
